DATE
March 1987

SUBJECT AREA: Ground Forces	NPIC IA NOTICE No. <u>13-87</u>
DISTRIBUTION: ALL IMAGERY ANALYSTS (IAs)	

TITLE/SIGNIFICANCE:
T-64A, T-64B, and T-64 M1981/1 Identification Features

COMMENT: The T-64A has a two-part optical range finder located on both the right and left side of the turret front. The left optic of the T-64B (photo on back) has been enlarged to accommodate a Laser Range Finder (LRF), while the right optic has been removed. The most significant change, however, is the addition of a missile guidance package for the gun tube-fired AT-8 ATG1 on the turret right. The T-64 M1981/1 (also on back) has the LRF on the turret left, no right side optic and a platform for the missile guidance package on the right. The package itself, however, is absent.
