MEMO FOR THE RECORD OF THE CLARK COMMITTEE

Office of Scientific Intelligence

0900-1200 Physics and Electronics Division
ELINT, NSC 169 and Frequency Usage File
1300-1400 Biology Division
1400-1500 Medicine Division
1500-1600 Chemistry Division

1. By his own admission, Colonel Miller "knows nothing about science", hence, as he proceeds further into OSI, he seems to be more and more at sea. As a result, his questions are academic, and of a searching nature. His principal concern revolves around ultimate responsibility for intelligence collection in specific fields of interest, specifically nuclear energy and enemy potential. The topic of ELINT seemed to impress him considerably, although the responsibility for said collection confused him.

2. Colonel Miller continues to be concerned over specific authority delegated to assumed responsibilities. He keeps asking, "Who told you to do such and so; do you have a directive assigning this job to you?"

3. A great deal of time was devoted to the very real problem of OSI scientific personnel, without solution. The problem revolved around how to attract and keep specialized personnel, and at the same time have them keep apace with their specialization in the field of industry and research. Colonel Miller and McGruder were vitally interested in what steps were being taken to maintain the interests and capabilities of the aforementioned, and at the same time avoid widespread, crippling turnovers. The subject of recruitment and training were also of great interest to Colonel Miller. In fact, the whole problem of personnel consumed the greater majority of the morning's session, and I can predict that this will be a target of interest when the task force hits the Office of Personnel Procurement and the Career Development Board. Principally, they are interested in projected plans to care for existing problems.

4. This question pops up repeatedly and will doubtless continue throughout the investigation: "What percent of your material do you obtain from what sources, either within or without the Agency"?
