**"Now, finally, we have his account of the most celebrated espionage incident of the Cold War!"**

"His most telling point is, we do not appear to have learned very much from the U-2 incident. A fascinating story, effectively told." — Robert Kirsch, Los Angeles Times

"A well-told . . . thrilling book. Many fascinating tales about CIA activity lead the reader to wonder whether Alice ever had a wilder time behind the looking glass." — Newsday

"Controversy has swirled around Powers since that fateful May 1, 1960. He was a pioneer in the transition of the old cloak-and-dagger technique to today's electronic eye-in-the-sky." — Bob Considine

"Highly critical of aspects of the U-2 overflights. You put his book down wondering whether other such missions are now in progress, and, if so, whether we are properly prepared for a failure." — John Barkham, Saturday Review Service
