

14 June 1984

This is the paper

NOTE FOR: D/ICS
DD/ICS

*Has already been on
your current intel
read board*

This is a good primer on civil earth sensing systems and for political/national security impact.

Recommend reading because its quicker and more comprehensive than briefing.

Have highlighted some parts but, even so, strongly suggest minimum reading should include all of key judgments (pages 3-6), new systems (pages 7-8), and prospects (page 21) to end (page 23).

The illustrations in the document really illustrate and are worth some study.

Chairman
