Agenda for Conference

29 May 1985

1D35 Headquarters

- | | | |
|-------------|--|------|
| 1400 - 1410 | Brief Update on Office Objective - D/OMS | |
| 1410 - 1425 | Advance Cardiac Life Support (ACLS)
Demonstration - <input type="text"/> | 25X1 |
| 1425 -1530 | Safe Haven Emergency Medical Care
Program - <input type="text"/> (MSO currently
detailed to State Department
Medical Staff) | 25X1 |

The Safe Haven briefing will cover the program's background, concept, current status, and future. It will include an oral presentation, video tapes, and live demonstration.

3 July 1985

MEMORANDUM FOR THE RECORD

SUBJECT: Office of Medical Services ^{2ND} Quarterly Review - 29 May 1985

1. Dr. Robert Ingram opened the Office of Medical Services (OMS) Quarterly with a discussion of 2nd quarter FY 1985 accomplishments on FY 1985 OMS objectives:

25X1

b. Information Management Branch, Registrar and Support Division. Second quarter objective to develop computer generated graphics was accomplished.

c. Clinical Activities Division.
Hardware was obtained to enhance psychiatric evaluation.

d. Selection Support Branch, Selection Processing Division (SPD). The review of charts, as part of the effort to improve psychiatric screening, was a bigger job than expected. Charts, for example, are being pulled back from the archive.

e. Psychological Services Division (PSD).
Automation activities of PSD and SPD will require installation of requested terminals in about one year.

f. Employee Assistance Program.
The program is very active with about 100 case actions per month, including 20 new cases.

g. Safety Division.
Second quarter milestones were met.

2. [redacted] then gave an introductory to OMS' Advance Cardiac Life Support System program. Among the statistics he provided were:

25X1

- o Ninety percent of men who die within one hour of the onset of initial symptoms, die from coronary heart disease.
- o Seventy percent of the persons experiencing cardiac arrest have a vibration or very rapidly beating heart. Only thirty percent have a stopped or markedly slowed heart.

3. This was followed by a very interesting demonstration by means of an actual Advance Cardiac Life Support System exercise. The OMS medical personnel who performed the demonstration were very responsive and professional. [redacted] indicated that over 30 OMS personnel have had Advance Cardiac Life Support System training.

25X1

4. A Safehaven briefing was provided by [redacted] indicated that an exercise is conducted at the end of each 16 hour Safehaven training program. A large Safehaven kit for 30-35 people is an integral part of the program. [redacted] OMS has provided Safehaven training to [redacted] Office of Communications personnel. Limited by the number of people available to instruct, OMS will concentrate on this domestic training program. [redacted] then gave the attendees a demonstration of a Safehaven training exercise with real live players. It was a very interesting and effective demonstration of innovative ways of meeting medical emergencies where a Safehaven kit is available, but medical personnel are not.
