Dear Mrs. Scharf:

At the January 6th meeting of the Board of Directors of the McLean Citizens Association, the proposed CIA Master Development Plan was discussed. The MCA has serious concerns regarding choice of options and we wish to express these to the Commission. There are two major areas of concern: 1) transportation and 2) landscaping. Other general comments have also been added.

The first area of concern is off-site transportation improvements. The MCA does not support the proposed CIA off-site transportation recommendations as the most appropriate alternatives to accommodate traffic level increases made necessary by on-site expansion plans. The MCA strongly recommends that the CIA continue working with the County, VDH&T, and MCA to consider all reasonable alternatives to provide necessary improvements to off-site roadways, including the George Washington Parkway, Route 193, the Turkey Run Farm access road, and Route 123. The off-site road improvements must provide safe access, egress, and throughfare adjacent to the CIA. The MCA feels that the fly-overs proposed by VDH&T, while solving a transportation problem, might create a visual intrusion upon the rural nature of Route 123 and Route 193 entrance area. The MCA is willing to explore the specific design of these improvements with the CIA, the County, and VDH&T.

Any support for on-site expansion is contingent upon the CIA securing federal funds for all off-site transportation improvements as part of Phase I development. These transportation improvements must be completed prior to occupancy of the new facility.

The CIA should continue its efforts to expand the use of van-pooling and carpooling. The CIA should also expand and stagger the number of shifts. These and other Transportation System Management measures cited in the Environmental Assessment will supplement the off-site improvements.

Any off-site road improvements should also be coordinated with VEPCO to ensure that adequate land is available in State right-of-way to accommodate a transformer station in the event that the transmission line through Evermay is placed underground.

The second area of concern is the landscaping. The MCA recommends that the CIA coordinate with MCA on the landscaping plans. The Savile Lane area requires both deciduous and evergreen

plantings to screen the nursery area. It would also be helpful if adequate clean-up provisions could be provided year round. The landscaping along the Turkey Run Farm access road should include evergreen plantings on the outside of the fence as well as a berm and screening on the inside of the fence. The Reception Center should be adequately screened so that the rural nature of the entrance is preserved.

Lastly, the Phase II development should ensure that the rural character of the Scattergood-Thorne site is preserved. The antennae should not be visual from off-site. The underground record storage entrance should either be screened from the conference house or conform to the architectural nature of the existing structures.

Fairfax County has completed an archeological survey for the entire Potomac River area except the CIA site. [redacted] the County archeologist, should be contacted and allowed to complete the survey prior to any commencement of construction.
