FIELD COVERAGE SCHEDULE

This report lists the electronic and printed media which the Operations Group of the Foreign Broadcast Information Service maintains on scheduled coverage. It includes also that coverage by the British Broadcasting Corporation and by [redacted] which complements FBIS coverage.

The schedule groups listings by country of origin and sourceline. Multiple sourcelines head any coverage to which two or more sourcelines are applicable, with the principal sourceline entered first. Those broadcasts, press agency transmissions, and publications which do not announce their true countries of origin appear in the "Clandestine" section.

The sourcelines under each country appear in the following order:

international broadcasts from the chief broadcasting city and then from other cities in alphabetical order

domestic radio and television broadcasts from the chief broadcasting city and then from other cities in alphabetical order

international presscasts

domestic presscasts from the principal commercial center and then from other cities in alphabetical order

publications from the national capital and then from other cities in alphabetical order.

Within these groups official transmissions precede semi-official and private ones, national services precede regional services, and network broadcasts precede local separations. Otherwise, sourcelines for electronic coverage appear in alphabetical order of language whenever the principal difference among them is the language. Publications from any given city appear in alphabetical order of their masthead titles, definite articles included.

CONTENT OF THE COLUMNS

This schedule expresses the TIMES for electronic coverage in Greenwich Mean Time (EST + 5 hours or EDT + 4 hours) and shows the nominal starting time and the ending time for each item of coverage. "0000" stands for the first moment of the GMT day and "2400" the last moment. When a cast does not adhere to a fixed schedule, the listing shows the nominal starting time followed by an ending time chosen to show the

usual duration of the cast. The bureaus sustain intercept and recording as long as is necessary to monitor the entire cast. Listings of broadcasts under each sourceline start with the earliest coverage of the local broadcast day; those for press transmissions start with the casts having the lowest item numbers. STAT

The listings show the DAYS OF COVERAGE by the use of initials of the days of the week, with certain exceptions. The word "daily" stands for coverage expected every day. The word "note" indicates a complex schedule which is explained in the NOTES column and the abbreviation "irreg" denotes coverage on a random basis. When the coverage is backstop or conditional the DAYS OF COVERAGE are irregular.

Digraphs indicate the MONITORING FACILITY:

EA-East Africa

JOINT BBC-FBIS

LD-London

A listing of two of these digraphs indicates interception of the coverage at the first facility and processing at the second. Monitorability and lag in receipt are as reported by the second facility.

The CLASS OF COVERAGE specifies the relative importance of each item of coverage, the immediacy with which the bureaus process it, and its special uses. These classifications are indicative of normal operations only; during a crisis each bureau monitors whatever it must to get the job done.

STAT

For Official Use Only

Class A denotes those transmissions and publications which comprise the core coverage of the monitoring operation. Bureaus monitor class A electronic coverage live and class A publications immediately upon receipt. This class comprises the most important newscasts, press reviews, and commentary programs on radio or television, the most productive press agency transmissions, and major publications. Each bureau is responsible for arranging backups, wherever possible, so that other bureaus are prepared to take over its Class A coverage when it is unable to maintain coverage for any reason. No broadcast coverage recorded by timer or press agency coverage printed unattended may be designated class A. Bureaus designate coverage as class A or discontinue class A coverage only with the concurrence of the Chief, Monitoring Operations Division.

Class B applies to other regular coverage processed normally within 24 hours of receipt, but which need not be covered in an emergency. This coverage produces a substantial volume of publishable wordage.

Class C coverage produces a limited volume of publishable wordage and may be dropped when bureau operations or staff shortages require.

Class D is special watch coverage producing a limited volume of important or unique material on priority intelligence targets, primarily the USSR and China. Bureaus should process class D coverage within 24 hours.

Class E is monitored primarily for reports on economics or business.

Class J is taken primarily for use in the publications of the Production Group.

Class L is monitored primarily to serve lateral recipients.

Class V is monitored principally for the production of video selection lists.

Class W is watch or cruising functions, including the coverage of program previews or program magazines.

Class Z is backstop coverage taken only when other coverage -- usually class A or B -- is unmonitorable or missed. Every listing in this class must relate to another listing from the same source country, whether at the same bureau or at another: radio and television broadcasts may backstop other broadcasts, presscasts may backstop presscasts, and

publications may backstop publications.

Class X is any which cannot be assigned to one of the preceding classes.

The MODE, shown by a trigraph, is the medium in which the coverage appears:

VBC -- voice broadcast monitored entirely from amplitude modulation mediumwave or shortwave stations

VFM -- voice broadcast monitored all or part of the time from a frequency modulation station

VLW -- voice broadcast monitored all or part of the time from a longwave station

SBC -- voice broadcast material monitored from an earth satellite

TVB -- television broadcast

TAO -- television broadcast, audio component only

STV -- television broadcast material monitored from an earth satellite

FON -- other radiotelephony

MOR -- Morse transmission

FAX -- facsimile transmission, including radiophoto but excluding hellschreiber

SFX -- facsimile monitored from an earth satellite

HEL -- hellschreiber transmission

RTT -- simplex radioteletype transmission

TEX -- teletext

TPX -- twinplex transmission with no submultiplexing

TTD -- twinplex transmission with time-division submultiplexing

FMX -- frequency-division multiplex transmission, not including TDM

For Official Use Only

TDM -- time-division multiplex transmission, not involving twinplex or FDM

FTM -- transmission combining frequency-division and time-division multiplexing

SRT -- radioteletype monitored from an earth satellite

OPX -- radio telegraphy

WSS -- wire service subscription received by landline

PUB -- a newspaper, magazine, journal, or handout

XXX -- other

The INDEX OF INPUT shows the average number of minutes per week (electronic) or issues per week (publications) of reg-

ular coverage available to FBIS. The index value is "0" or "0.00" for all backstop coverage and for all coverage taken irregularly or conditionally.

The USUAL MONITORABILITY (electronic coverage only) has four permissible values: "good" (all words monitorable), "fair" (occasional words and phrases unmonitorable), "poor" (intermittently monitorable but unsuitable for texting), or "unmn" (unmonitorable, no processing possible).

The LAG (publications coverage only) expresses the average number of days between the nominal date of publication and the receipt of that publication at the monitoring facility.

The NOTES include the type of program and may also include the name of the program, the transmission service in which it appears, the target, irregularities of scheduling, the nature of a publication, etc.
