

FOR OFFICIAL USE ONLY

DEPARTMENT OF THE ARMY

OFFICE OF THE ASSISTANT CHIEF OF STAFF FOR INTELLIGENCE

WASHINGTON, D.C. 20310

ACSI-DSRSID

16 July 1968

MEMORANDUM FOR: CHAIRMAN, COMPUTER SECURITY WORKING GROUP, USIB SECURITY COMMITTEE

SUBJECT: Enumeration of Individual Agency Computer Security Problem Areas

1. The enumeration of Department of the Army's computer security problem areas can only be addressed in general terms. An exhaustive list of actual problems would be redundant and meaningless without going into excessive detail which is not appropriate at this stage of defining the problem.
2. Varying degrees of security problems are encountered in:
  - a. Sanitization of storage media.
    - (1) Disc
    - (2) Drum
    - (3) Core
    - (4) Magnetic tape
    - (5) Magnetic cards
  - b. Remote access devices.
  - c. Files integrity.
  - d. Co-location of Intelligence Data Handling Systems handling SI material with Command and Control Systems not indoctrinated for SI.
  - e. TEMPEST.
3. With the introduction of multi-user, time shared computers, the following additional problems are anticipated:
  - a. Remote access devices, unclassified vs classified.

SUBJECT: Enumeration of Individual Agency Computer Security Problem Areas

- b. Files integrity, multi-user.
  - c. Program integrity.
  - d. Need-to-know access only.
  - e. Unauthorized disclosure (spillage).
  - f. Deliberate attempts to penetrate unauthorized files and programs.
  - g. Security of communications.
  - h. Personnel security (larger numbers, less supervision).
4. Paragraphs 2. and 3., do not address the security problems associated with classifying, storing, accounting, downgrading and destruction of documents, reports, and other outputs of computer systems. While these are continuing problems, current Army Regulations appear to be adequate.
