This publication is prepared for the use of US Government officials, and the format, coverage, and content are designed to meet their specific requirements. US Government officials may obtain additional copies of this document directly or through liaison channels from the Central Intelligence Agency.

Requesters outside the US Government may obtain subscriptions to CIA publications similar to this one by addressing inquiries to:

**Document Expediting (DOCEX) Project
Exchange and Gift Division
Library of Congress
Washington, D.C. 20540**

or: **National Technical Information Service
5285 Port Royal Road
Springfield, VA 22161**

Requesters outside the US Government not interested in subscription service may purchase specific publications, either in paper copy or microform from:

**Photoduplication Service
Library of Congress
Washington, D.C. 20540**

or: **National Technical Information Service
5285 Port Royal Road
Springfield, VA 22161
(To expedite service call the
NTIS Order Desk (703) 487-4650)**

Comments and queries on this paper may be directed to the DOCEX Project at the above address or by phone (202-287-9527), or the NTIS Office of Customer Services at the above address or by phone (703-487-4660). Publications are not available to the public from the Central Intelligence Agency.

This publication may also be purchased from:

**Superintendent of Documents
US Government Printing Office

Handbook of Economic Statistics, 1988

Purpose and Scope

The *Handbook of Economic Statistics*, 1988, provides statistics for selected non-Communist countries and all of the Communist countries.

In general, the data in the *Handbook* are for 1960, 1970, 1975, 1980, and 1983-87. Data for the Communist and non-Communist countries have been adjusted, when necessary, to achieve comparability and therefore may differ from data presented in the original sources. Footnotes have been used liberally to give definitions, exceptions, and methodology. The base year for average annual rates of growth is the year prior to the stated period.

Rounding of Totals

Totals are computer generated and should be rounded to three significant digits for analytical use. Totals are not presented if missing data are believed to represent a significant part of the total. In general, zeros appearing after the last nonzero number following the decimal point are not significant but are used merely for consistency in presentation.

Abbreviations

The abbreviation NA (not available) is used when information about the existence of the data or the magnitude of the data is not available. The abbreviation NEGL (negligible) is used when the magnitude of the data is less than one-half of the final unit employed for each table.

Sources

The data given for the most recent years are frequently preliminary and subject to revision. The data for Communist countries are official data from the country cited, CIA estimates, or estimates made by other organizations. The data for non-Communist countries are from publications of:

- The United Nations
- The Organization for Economic Cooperation and Development (OECD)
- Other international organizations
- US Government agencies
- Individual country reports
- Estimates of this Office.

Definitions

The following definitions are used unless otherwise indicated in the text:

Communist Countries—USSR, Eastern Europe, Albania, Cambodia, China, Cuba, Laos, North Korea, Vietnam, and Yugoslavia.

Eastern Europe—Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, and Romania.

European Community—Belgium, Denmark, France, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, United Kingdom, and West Germany.

Developed Countries—the European Community, Australia, Austria, Canada, Finland, Iceland, Israel, Japan, Liechtenstein, Malta, New Zealand, Norway, Republic of South Africa, Sweden, Switzerland, Turkey, and the United States.

Organization for Economic Cooperation and Development (OECD)—all the developed countries, except Israel, Liechtenstein, Malta, and the Republic of South Africa.

Big Six—Canada, France, Italy, Japan, United Kingdom, and West Germany.

Big Seven—the United States and the Big Six.

Newly Industrializing Countries (NICs)—Argentina, Brazil, China (Taiwan), Hong Kong, Mexico, Singapore, and South Korea.

Except for economic aid, the definition *Less Developed Countries (LDCs)* include:

- All independent countries of Africa, except the Republic of South Africa.
- All independent countries of East Asia, except Japan.
- All independent countries in Latin America, except Cuba.
- All independent countries in the Middle East and South Asia, except Israel and Turkey.

In the LDC grouping no East or West European country, except for Cyprus, and no territory that is a possession, trust, or protectorate, except for Hong Kong, is included.

The definition of *less developed countries* for economic aid conforms to that used by the Development Assistance Committee (DAC) of the OECD and other aid agencies and includes the following non-Communist countries:

- All independent countries of Africa except the Republic of South Africa.
- All countries of East Asia except Hong Kong and Japan.
- Malta, Portugal, and Spain in Europe.
- All independent countries in Latin America, except Cuba.
- All countries in the Middle East and South Asia.

Note: Totals for the country groupings may or may not include all of the countries listed above, depending on the commodity or services listed.

Figure 11
Measures of Energy Efficiency, ^a
1975-86

^a Care should be taken in comparing the Soviet oil-to-GNP ratio directly with the ratio of Western countries. The Soviet series is based on apparent oil consumption because the Soviets do not publish data on consumption. The apparent consumption series does not take into consideration possible changes in year-to-year oil stock levels and is based on reported oil production and estimates of oil exports and imports.

^a Data were converted to US dollars by the use of purchasing power parities used by the OECD.

^b Data were converted from national currencies by using the 1987 Par Rate/Market Rate factors.

^c Data are for 1986.

^d Data for the USSR were constructed as follows:

- Soviet GNP was estimated in 1982 rubles using the methodology described in Table 32.
- The ruble estimates were multiplied by the geometric mean of two dollar-ruble ratios—one weighted with US price weights, the other with Soviet weights. For a discussion of this procedure, see "US and USSR: Comparisons

of GNP," published in *Soviet Economy in a Time of Change*, Joint Economic Committee, Congress of the United States, 10 October 1979, pp. 369-401.

- The resulting GNP estimates in 1982 US dollars were converted to a 1987 price base using the US GNP implicit price deflator.

^e GNP estimates for Hungary, Poland, Romania, and Yugoslavia are based on benchmark figures for 1975, in 1975 dollars in Kravis, Heston, and Summers, *World Product and Income: International Comparisons of Real Gross Product*, Baltimore: Johns Hopkins University Press, 1982. GNP

indexes in constant domestic currencies derived from official data were combined with the 1975 benchmarks to yield time series in 1975 dollars. The US GNP deflator was then applied to the series to convert 1975 dollars to 1987 dollars. For Bulgaria, Czechoslovakia, and East Germany, 1970 benchmarks were shifted to 1975 in proportion to the geometric mean of the benchmark shifts for Hungary, Poland, Romania, and Yugoslavia. The 1970 benchmarks were taken from *UN Economic Bulletin for Europe*, vol 31, no. 2, 1980.

^f Official Chinese statistics.

Table 8
Gross National Product, by End Use,
in the US and the USSR, 1987^a

	Billion 1982 Rubles			Billion 1982 US \$			Geometric Mean of the Comparisons in Dollars and Rubles USSR as a Percent of US
	USSR ^b	US	USSR as a Percent of US	USSR	US	USSR as a Percent of US	
GNP	766	1,857	41	2,608	3,797	69	53
Of which:							
Consumption	408	1,536	27	1,253	2,637	48	36
New fixed investment	217	233	93	928	776	120	106

^a The preferred procedure for making international economic comparisons is to convert each country's GNP to the currency of the other. Two comparisons can then be made, one in rubles and one in dollars. The two comparisons will yield different answers. This phenomenon is commonly known as the "index number problem," and it results from differences in the relative price and quantity structures found in each country. Goods produced in relatively large quantities in either country tend to sell at relatively low prices in the country, and vice versa. Soviet GNP is, therefore, a large share of US GNP when comparisons are made in dollars since dollars place a greater weight than ruble prices do on investment and defense goods, which account for larger shares of output in the Soviet Union than in the United States.

The important point about index numbers is that valuations in either rubles or dollars are equally correct. When a single comparison of US and Soviet GNP is required, economists by convention often use the geometric mean of the ruble and dollar comparisons as a reasonable compromise that falls between the two.

The geometric mean comparison is presented here, although the reader is cautioned that it is used for its

presentational convenience and does not, strictly speaking represent a more valid result than that presented in either currency.

The estimate of Soviet GNP in dollars presented here is different from that given in Table 7, which uses the geometric mean of the comparisons for consistency with the other data in that table. The approach used in this table, however, is theoretically preferable.

^b The above Soviet GNP data in established prices should not be used in conjunction with Soviet foreign trade data appearing in Tables 138-140. These latter tables use official foreign exchange rates to derive dollar values for trade; we have yet to estimate the value of Soviet foreign trade in terms of actual purchasing power, which would allow for an estimate of the share of foreign trade in Soviet national income.

The magnitudes for the Soviet end-use components were calculated to measure value of output compared with the United States but not the cost in resources. The share of total economic resources devoted to particular end use (such

as defense) or the share of total output originating in an individual sector (for example, agriculture or industry) in the USSR should be measured in internal ruble prices and costs.

The identified end uses of GNP are defined as follows:

- (1) Consumption includes personal expenditures for goods and services for all purposes and noninvestment outlays by government for goods and services for health and education.
- (2) New fixed investment is defined as the sum of expenditures for gross private domestic investment net of inventories; for public construction other than that for military facilities; and for equipment purchased by the government except that for defense. Since part of Soviet capital repair is considered new investment in the Western sense, a portion of Soviet expenditures on capital repair is included in Soviet new fixed investment.

Other uses of GNP include defense, space, research and development, inventory change, administration, net exports, and a statistical discrepancy. The total value for these expenditures cannot be derived for the USSR by subtraction, however.

^a Preliminary.

^b The official indexes purportedly measure changes in the gross value of industrial production. In general, the gross value of production equals the sum of the value of output of all industrial enterprises. As a result, since both intermediate and final goods are included in the value of output of each enterprise, industrial products are double counted. For example, steel used in producing automobiles is counted in the value of both steel output and automobile output. To the extent

that such double counting increases over time, an upward bias is imparted to the official measure. In addition to possible overstatement in the official indicator from this source, disguised inflation also enters the index through new-product pricing, where minor product improvements result in a new-product price that is substantially higher than can be justified by either improved quality or increased production costs. Because output of these "new" products grows from a small base, their rates of growth will proceed at a higher rate than those of "old" products.

Adjusted indexes of industrial production—parallel to those used by the Federal Reserve Board for measuring US industrial output—are constructed in order to circumvent most of these distortions, that is, price-weighted samples of products form output indexes for various industrial components and these component indexes are combined into an aggregate index for industry by use of 1982 value-added weights.

^c An adjusted index is not available.

^a Indexes for the non-Communist countries are value-added weighted indexes of intermediate and final products of industry. Industry includes manufacturing, mining, and, in most countries, public utilities. The indexes for the Communist countries are estimates of CIA (see Table 12 for detailed explanation)—constructed as nearly as possible on the same basis as the indexes for Western countries—or other calculations accepted by CIA. The indexes for the Communist countries include manufacturing, mining, and public utilities.

^b Preliminary.

^c Index of gross values of output for individual commodities and branches are aggregated by 1982 value-added weights. The three sectors covered— materials, machinery, and non-durable consumer goods—constitute 50 percent, 33 percent, and 17 percent, respectively, of the value-added weights for industrial production. This index is as comparable as data will permit with the index of US industrial production of the US Federal Reserve Board.

^d CIA estimates for 1960-75 were computed by applying value-added weights to data for commodity production. The data are fragmentary and uncertain; therefore, the index should be regarded as providing only a tentative indication of the general level and trend in production. The index for 1980-87 follows the trend for reported gross value of industrial output.

^a Except for the United States, data are from the United States Arms Control and Disarmament Agency, *World Military Expenditures and Arms Transfers*, based on the ratio of military expenditures to GNP at current market prices. Military expenditures are for current and capital expenditures to meet the needs of the armed forces, including expenditures of national defense agencies for military

programs; expenditures for the military components of such mixed activities as atomic energy, space, and research and development; military assistance to foreign countries; and expenditures on paramilitary forces where they contribute substantially to a country's military capabilities.

^a Implicit price index obtained from a comparison of indexes of goods sold in the retail trade network in constant and in current prices. The current price index is based on the values of total retail and collective farm market sales in current prices regularly published in Soviet statistical abstracts. The index in constant 1982 prices is derived from the goods components of the CIA index of total consumption. A more complete explanation of the methodology and a discussion of the relative merits of an "official" or "alternative" price index are contained in "Soviet Economy in a New Perspective," US Congress, Joint Economic Committee, 14 October 1976, p. 631.

^b Calculated differently from that for the USSR; the official index of personal consumption in current prices was deflated by a calculated index of personal consumption in constant

prices. An explanation of the methodology is presented in Thad P. Alton, Gregor Lazarcik, Elizabeth M. Bass, and Wassyl Znayenko, "Official and Alternative Consumer Price Indexes in Eastern Europe: Selected Years, 1960-81," *Occasional Paper No. 73 of the Research Project on National Income in East Central Europe* (NY: L.W. International Financial Research, Inc., 1982).

^a For the individual countries, the ratios for converting GDP in national currencies at 1987 prices into 1987 US dollars on the basis of purchasing power equivalents are derived from the 1975 ratios in *World Product and Income: International Comparisons of Real GDP*, published for the World Bank by the Johns Hopkins University Press, Baltimore and London, 1981, using the geometric mean of foreign and US weighted ratios. These 1975 GDP parities were moved to 1987 by applying the following factor: the derived price index for each OECD country for 1976-87 divided by a

derived price index for the United States for 1976-87. These price indexes were derived for each country by dividing the growth of GDP in current prices by the growth of GDP in constant prices. The ratios thus obtained were applied to the GDP values, given in the national currencies in 1987 prices.
^b For the individual European countries, the ratios for converting GDP in national currencies at 1987 prices into 1987 US dollars on the basis of US purchasing power equivalents are derived from the 1950 ratios in Milton

Gilbert and Associates, *Comparative National Products and Price Levels*, OEEC, Paris, 1958, using the geometric mean of European and US weighted ratios. These 1950 ratios were moved to 1987 by applying the following factor: the derived price index for each European country for 1951-87 divided by a derived price index for the United States for 1951-87. The ratios thus obtained were applied to the GDP values, given in the national currencies in 1987 prices.

Soviet Economic Performance

To circumvent problems with official Soviet measures of economic growth, CIA constructs synthetic estimates of gross national product (GNP) and its major components. Total GNP covers value added by primary inputs of labor and capital in sectors of origin, such as industry and agriculture. Unlike Soviet statistics, CIA estimates of GNP:

- Avoid much of the hidden inflation problem by using quantity data—mostly from Soviet sources—on output of individual products, valued at prices of a fixed base year.
- Include depreciation and services that do not contribute directly to output of material goods.
- Provide improved measures of resource allocation and of growth in the economy's production potential by adjusting valuation from official prices to factor cost.

CIA estimates for industry, like those of GNP, are corrected for hidden inflation in Soviet measures. Moreover, value-added weights for these estimates eliminate much of the double counting—present in official statistics on gross value of output—of inputs sold from one producer to another.

CIA estimates for agriculture, net output, exclude agriculture's use of its own products as inputs but includes inputs from industry and other sectors. For estimating value added, inputs from industry and other sectors are also subtracted. Soviet statistics on gross values of output reflect a good deal of double counting within agriculture, but hidden inflation is not a significant problem.

All GNP estimates in this edition of the *Handbook* are based on values at 1982 factor cost.

^a Because of the well-known difficulties in using Soviet established prices as a measure of resource burden, the shares of GNP in this table are based on GNP at factor cost. In calculating GNP at factor cost, 1982 end-use weights have been revised from an established price basis to a factor cost basis by subtracting turnover taxes and profits and adding subsidies and implicit capital charges. These revised

weights are then moved over time by indexes of the various end uses in constant prices.

^b Preliminary.

^c Including consumption of food, soft goods, durables, personal services, and personal and government outlays for education and health.

^d Including machinery and equipment, capital repair, construction and other capital outlays, and net additions to livestock.

^e Total investment less capital repair.

A useful starting point for analyzing the 1986-90 plan for the USSR is to compare it with earlier five-year plans and results. If official Soviet measures of actual growth are used in such comparisons, however, the extent of plan fulfillment is exaggerated. These measures are subject to upward bias because of hidden inflation and double counting—problems that appear not to affect plan figures.¹ CIA estimates of Soviet economic growth correct for this upward bias and, therefore, are

better suited than official statistics for comparisons with planned growth.

¹ For discussion of these problems, see Joint Economic Committee, Congress of the United States, *USSR: Measures of Economic Growth and Development, 1950-80* (Washington, US Government Printing Office, 1982), pp.v-vi, 12-13, 212-215, 278-281; and CIA, *Comparing Planned and Actual Growth of Industrial Output in Centrally Planned Economies*, ER 80-10461, August 1980.

Total industrial production	6.5	6.3	5.4	2.6	1.8	2.5	2.5	1.8	2.6	1.5

^a Based on CIA estimates rather than Soviet official series. The latter are believed to contain an upward bias in rates of growth because of double-counting and disguised inflation. The branch indexes shown above are formed by combining price-weighted samples of products into sector indexes, which in turn are combined into branch indexes using 1982

value-added weights. The indexes for industrial materials, consumer nondurables, and total industrial production are formed by combining the component branch indexes using 1982 value-added weights.

^a Including all countries trading with the Soviet Union on a hard currency basis as of 1 January 1987.

^b The importance of hard currency trade is overstated for exports and understated for imports in Soviet statistics

because of the artificial prices the USSR uses in its CEMA country trade.

^c Including imports of pipes.

^a Data are on a carcass weight, bone-in basis, and are for beef, veal, buffalo, pork, mutton, lamb, goat, and poultry where they are produced. Unless otherwise indicated, data exclude horsemeat, rabbit, game, edible offal, and lard.^b Data are on a slaughter weight, bone-in basis, and include horsemeat, rabbit, game, edible offal, and slaughter fats in addition to the meats listed in footnote a above. Slaughter weight is roughly 3 percent less than carcass weight because it excludes kidney and leaf fat. As a result of this broader

coverage, the meat production data for the USSR and Eastern Europe are above the level attained if the coverage was limited to that shown for other countries.

^c Data are for pork, beef, and mutton.^d State purchases only.

^a Unless otherwise indicated, data are for steam and hydraulic turbines. Most production of turbines is for use in matched sets with generators for production of electricity. In addition, turbines are produced in single units for many purposes, including direct industrial drives, marine propulsion, and pipeline transmission.

^b Including a number of gas turbines.
^c Steam turbines only.
^d Steam turbines of more than 500 kilowatts only.

^a Data include only gas from natural gas wells and associated gas from petroleum fields.

^b Data are for net production—that is, for gas actually collected and utilized as fuel or raw material. They exclude gas used for reinjection, as well as gas flared, vented, or wasted, whether or not it has been processed for the extraction of natural gasoline.

^c Data for the United States are in terms of net marketed production. Data for the USSR refer to gross production less losses and waste. US gross production (less losses and waste), which includes gas reinjected in order to maintain reservoir pressure, would be as follows (in billion cubic feet):

1960	1965	1970	1975	1980
14,510	17,660	23,790	21,105	21,870
1983	1984	1985	1986	1987
18,595	20,190	19,535	19,065	19,805

A much smaller share of total production in the USSR is believed to be used for reinjection.

^d Including gas used for repressuring and gas wasted.

^e Gross production.

^a Data are for total (gross) production at generating centers and therefore include transmission losses and station use (see footnote b).

^b Data are gross production or estimates of gross production based on reported net, adjusted by increasing by 7.5 percent the thermal electric production to include production that is

consumed by the station itself. Hydroelectric production that is consumed by the station itself is a negligible part of the gross production. Therefore, no attempt has been made to adjust the net production for hydroelectric power.

^c Beginning in 1980, data are for public utilities only.

^a Data are for the following products, where they are produced: barley, corn, oats, rice, rye, sorghum, and wheat.
^b Including miscellaneous grains and pulses. Measured in bunker weight, that is, gross output from the combine which includes excess moisture, unripe and damaged kernels, weed seeds, and other trash. For comparison with US or other country grain output, an average discount of 11 percent should be applied.

^c Including miscellaneous grains.

^d Including pulses.

^e Romanian government estimate, probably higher than actual.

^f Data reflect only rice production.

^g Including soybeans, broad beans, and field peas. Tubers are included on a grain equivalent basis of 5 metric tons of tubers to 1 metric ton of grain for 1970-87 and on a grain

equivalent basis of 4 metric tons of tubers to 1 metric ton of grain for 1960.

^h Data reflect only government collections of corn and rice; total production of grains is somewhat higher.

ⁱ Including corn, manioc, sweet potatoes, and soybeans on a paddy-equivalent basis (1 ton paddy = 0.63 tons of grain or rice).

^a Rough, or paddy, rice. Data refer to crops harvested in the last half of the year stated, combined with crops harvested in the first half of the following year.

^b US Department of Agriculture estimates.

^c Milled rice. Data reflect government collection only.

^d Prior to 1980, data for North Vietnam.

^a Unless otherwise indicated, data are for beet sugar produced in the calendar year. Data are given in terms of the raw value of centrifugal sugar. Refined sugar is equal to approximately 92 percent of raw sugar weight. Centrifugal, as distinguished from noncentrifugal, sugar includes cane

and beet sugar produced by the centrifugal process and is the principal type of sugar moving in international trade.
^b Including Puerto Rico, for all years except 1960 and 1970.
^c Cane sugar only.
^d Including cane sugar.

^a Unless otherwise indicated, data are for the gross amount of marketable iron ores in the state in which they leave the mines, including manganiferous ores but excluding pyrites.

^b The metal content of the ore in the OECD countries varies from year to year. The approximate current content is as follows: France, 32 percent; Spain 30 percent; United States

and Canada, 61-63 percent; and Australia and Sweden, 60-65 percent.

^c The metal content of the ore in the other countries ranges from 30 percent to 68 percent.

^d Final product. Data on gross amount of marketable ores not available.

^a Data are for noncellulosic fibers whether made of natural polymers, which are based on materials such as casein or groundnuts, or made of synthetic polymers, which are based mostly on coal or petroleum. Data exclude waste, glass fibers, and rubber fibers.

^b "Delivery weight," approximately 3 percent less than "actual weight," prior to mid-1970. Thereafter, approximately one-half of production is reported as "actual weight."

^a Average exchange rate for the year. Some countries also have special exchange rates for noncommercial transactions, such as diplomatic, tourist, and student expenditures and for personal remittances.

^b The unofficial rates actually used in East German accounting of foreign trade transactions. East Germany maintains that an East German mark is equivalent to a West German mark.

^c Since January 1976, Hungary has expressed the value of its foreign trade in domestic forints rather than diviza forints.

^d End of year rate. Noncommercial rate through 1977. Data for 1980-82 are estimated.

^a Official Soviet statistics using US dollar exchange rates for the Soviet foreign exchange ruble as announced by the State Bank of the USSR. Exports are f.o.b.

^b The major components do not add up to the total export figure for the 1980-85 period because the Soviet Union

released data for total exports but withheld data on exports of base metals and manufactures.

^c Including small amounts of charcoal and other solid fuels.

^d Excluding wheat flour.

^a The values of East European imports by commodity group were calculated by applying East European data on percentage breakdowns to total imports expressed in US dollars (see table 143, footnote a). Values for 1987 were estimated using percentage shares for 1986.

^b Preliminary.
^c Data are for 1986.

1987 ^c	Exports	NA	NA	NA	NA	NA	NA
	Imports	7,236	NA	NA	NA	NA	NA

^a Exports are on an f.o.b. basis; imports are on a c.i.f. basis. Cuban trade with non-Communist countries is based on hard currency world prices while its Communist country trade uses soft currency negotiated prices which are frequently subsidized in Cuba's favor and do not reflect real market values. The result is a more favorable global trade

balance than if Cuba conducted all of its trade at world market prices.

^b Including data for Albania, China, Cuba, Mongolia, North Korea, Vietnam, and Yugoslavia.

^c Preliminary.

Nickel ^e	555	30	15	0	120	105	105	100	100	100

^a Based on official Cuban and Soviet trade data. Data rounded to the nearest \$ 5 million.^b Based on (a) estimated balance-of-payments aid necessary to cover Cuban trade deficits with the USSR; (b) Cuban purchases of capital goods from Moscow; and (c) public statements by Cuban and Soviet officials concerning the amount of development aid extended. This aid is repayable, but terms are highly concessional.^c Sugar and nickel subsidies are estimated as the difference between the price Moscow pays for these commodities and their world market value. The difference is considered a grant and not subject to repayment.^d The petroleum subsidy reflects the difference between the value of petroleum purchased from the USSR and the value of these imports at world market prices. It is considered a grant and not subject to repayment.

^a Excluding urban systems; plantation, forest, mine, industrial plant, underground, funicular, and cable railroads; and short line of little importance. Unless otherwise indicated, data are for the state or principal railroad system and include all goods and livestock carried during the calendar year and exclude service traffic, mail, and nonrevenue government stores. Freight traffic carried on more than one

railroad line within a country is counted only once. Foreign trade freight traffic carried through more than one country, however, is counted in each country. Data for the United States include express and mail and are specifically for revenue and nonrevenue freight traffic for a more realistic comparison with Soviet methods of reporting.

^b Including secondary or private railroads operating as common carriers.

^c Excluding livestock.

^d Excluding data for Northern Ireland.

^e Including mail and passenger baggage. Data are for the year beginning 1 April of the stated year.

^f Including service traffic.

^a Data exclude light aircraft. No attempt has been made to standardize comparisons of the US and Soviet aircraft inventories in terms of capacity for passenger-cargo carrying and/or range capability.^b Large aircraft only. Data for all cargo operators not available prior to 1980. This data refers to certificate route carriers, supplementals, commercial operators, and all cargo operators.^c Includes large aircraft operated by supplemental air carriers, commercial operations, intra-state air taxi and commuter operations after 1985.^d Data basically represent the inventory of Aeroflot—the Soviet civil airline.

^a Ships of 1,000 gross register tons (GRT) or more. Data are as of the end of the year. Data for the non-Communist countries include all combination passenger and cargo ships, whereas, unless otherwise indicated, those for the Communist countries exclude passenger ships that have small cargo capacities.

^b Excluding ships operating only on the Great Lakes and US-owned ships flying the Liberian, Panamanian, and other "flags of convenience."

^c Excluding Greek-owned ships flying the Liberian, Panamanian, and other "flags of convenience."

^d Excluding the Caspian Sea Fleet passenger ships and vessels subordinate to the Ministry of the Fishing Industry.

^e Before August 1968, a few additional Bulgarian-owned ships were operated under the flags of non-Communist countries.

^f Until March 1967, an undetermined number of Czechoslovak-flag ships were jointly owned with China.

^g Including some ships flying the Polish flag but under the control of the Chinese-Polish Shipbrokers Corporation. At the end of 1985, there were 13 of these ships.

^h Data include a number of ships jointly owned by the Chinese-Albanian Joint Stock Shipping Company.

ⁱ Including North Korean and Vietnamese vessels.

^a Tankers and whaling tankers of 1,000 gross registered tons (GRT) or more. Data are as of the end of the year and include specialized oil and chemical tankers and some combination carriers (oil/dry bulk carriers). For the purposes of this table, the tonnage is converted to deadweight (DWT).

^b Excluding ships operating only on the Great Lakes and US-owned ships flying the Liberian, Panamanian, and other "flags of convenience."

^c Excluding Greek-owned ships flying the Liberian, Panamanian, and other "flags of convenience."

^d Excluding the Caspian Sea Fleet and tankers assigned to the Ministry of the Fishing Industry.

^e Including North Korean and Vietnamese vessels.

Imports, Big Seven	150-151, 154-155	Lead, smelter.....	22, 70, 87
China	25, 172, 174	Less Developed Countries (LDCs),	
commodities, net	17	academic, technical, and military	
Cuba	175-176	trainees to Communist	
Eastern Europe	25, 167, 169, 171	countries	189
non-Communist countries	24, 26-28, 146-147	agriculture per capita	27
USSR	25, 73-75, 164, 166	aid (see Aid)	
		arms transfers	177, 184-185
		Communist economic and military	
		technicians in	186-187

Index (continued)

Topic	Page	Topic	Page
Less Developed Countries (continued)		Newly industrializing countries (NICs)	
debt, medium- and long-term,		economic profile, selected	26
selected	44	trade with Big Seven	160
economic indicators, non-OPEC	45	Newsprint	72, 94
economic profile, selected	27	NICs (see Newly Industrializing Countries)	
inflation rate trends,		Nickel, refined	69, 86
aggregate	13	Nitrogen fertilizer, consumption	68, 82
manufacturing per capita	27	production	22, 90
military personnel training in		Nonagricultural labor force	50
Communist countries	188	Non-Communist countries,	
money supply (non-OPEC)	45	exports	144-145
oil import bill	105	imports	146-147
US military deliveries	184-185	oil export revenues	104
Life expectancy	24-28	oil import bill	105
Lignite (see Brown coal)		trade balance	148-149
Literacy rate	26-28	Nuclear electricity generating	
		capacity	112
Machine tools and robotics	18, 71, 92, 162	primary energy	100
Magnesium, primary	70	Ocean freight traffic	198
Manganese ore	84	OECD, oil imports	106
Manufactured goods (see Chemicals and Manufactured Goods)		Oil, consumption	24-25, 101
Meat	23-25, 79	crude	28, 67, 100-103, 106, 110
Merchant fleet inventory	23, 202-203	crude prices, world	42
Metal prices	41	crude production	22, 28, 102
Metalcutting machine tools	71, 92	crude proved reserves	110
Metalforming machine tools	71	crude refining capacity	101
Metals (see Minerals and Metals)		export revenues	28, 104
Microelectronics	18, 162	exporters	28, 103
Military deliveries, US to LDCs	184-185	GNP ratio, selected countries	16
Military personnel from LDCs		import bill, selected countries	105
trained in Communist countries	188-189	importers	103
Milk	23, 80	imports by OECD	106
Minerals and Metals	125-134	trade	103-106
Molybdenum	70	OPEC, economic profile	28
Motor vehicle freight	194-195	oil prices	42
		Ore, iron	69, 127
Natural gas, production	22, 100, 107	manganese	84
proved reserves	110		
Natural rubber	124		

Index (continued)

Topic	Page	Topic	Page
Ore (continued)		Primary aluminum	22, 69, 131
tungsten	69, 85	Primary energy	24-25, 67, 98-100
Organization for Economic Cooperation and Development (see OECD)		consumption	70, 98
Organization of Petroleum Exporting Countries (see OPEC)		production	99-100
Paper (see Newsprint)		Primary magnesium	70
Passenger automobiles, production	16, 22, 71, 140	Primary tin	22, 70, 88
Passenger traffic, air	198	Productivity, aggregate factor,	
Per capita,		USSR	63
GNP	10-11, 24-25, 28	industrial factor, USSR	63
GDP	26-27	manufacturing	57
USSR, consumer items	66	Proved Reserves of Crude Oil, Natural Gas, and Coal	110
consumption growth	65	Purchasing power equivalents, GDP	54
Personal savings rates, Big Seven	58	Railroad freight car production	72, 94
Petroleum pipeline transportation	200	Railroad freight traffic	23, 192-193
Phosphate fertilizer,		Rates of exchange, Communist countries	163
consumption	68, 82	Refined copper	22, 69, 86
production	22, 90	Refined nickel	69, 86
Pig iron	22, 69, 128	Refined zinc	22, 70, 87
Pipeline transportation, petroleum	200	Reserves,	
Plastics	71, 137	crude oil, natural gas, and coal	110
Platinum-group metals	70, 134	gold, USSR	76
Plywood	72, 95	Rice	22, 67, 120
Population	12, 22-28, 46-47	Rolled steel	69, 130
Ports, offloading, accessible to fully loaded tankers	206-212	Rubber, natural	124
Potassium fertilizer,		synthetic	71, 138
consumption	69, 83	tires	72, 142
production	22, 91	Savings rates, personal, Big Seven	58
Potatoes	22, 67, 78	Smelter lead	22, 70, 87
Power generating equipment	91-92	Smelter, primary tin	70, 88
Price deflators, GDP	55	Soda, caustic	70, 88
Prices, consumer	39	Soviet (see USSR)	
agricultural	40	Soybeans	68, 122
export, import, and terms of trade	56-57, 158-159	Sponge metal, titanium	70
metal	41	Statistics, world, selected	22-23
oil	42
