DESCRIPTORS: \*Odors, Chemical properties, Physical  
properties, \*Molecular structure, \*Sensory perception.

In some fields of perfume chemistry it is possible to set  
up by analogy inference rules governing the presumable  
odour of chemically related compounds; such rules allow  
an approximated prediction of an odour. There are  
series of chemically similar compounds where only part  
of the whole complex "odour" is changed from one mem-  
ber to the next. Groups having a rather characteristic  
scent can even impart this specific scent to a bigger
