DESCRIPTORS: *Magnets, Capacitors, Magnet coils,
Pulse generators

After an introductory consideration of the development of
permanent magnet materials and the problems arising in
their magnetization, a magnetization apparatus is de-
scribed in which the energy of a condenser charge is
utilized. Impulse magnetization is always the sole pos-
sibility, where permanent magnets and magnet systems
with very narrow pole gaps, high coercive field strengths,
and complicated shapes are concerned. The peculiarities
of these impulse magnetizers and their auxiliary appa-
