A total of 60 different filler materials was investigated for the purpose of determining relationships between the physical and chemical properties and the technological behavior of the corresponding filled vulcanizates of Buna-S and natural rubber. It was found that with heavily loaded vulcanizates the values for softness, Shore-hardness, and for the most part, impact elasticity were primarily dependent upon the magnitude (Materials--Rubber, TT, v. 9, no. 10) (over)

Two new colorimetric methods for the quantitative  
determination of organic peroxides are described. Both  
of them operate in organic solvents and in the homo-  
geneous phase. For determinations in glacial acetic  
acid, the indamine method, and for determinations in  
benzene, the methylene-blue method is recommended.

PHOSPHORUS-NITROGEN COMPOUNDS, tr. by Kerstin

v. 69, p. 105.

DESCRIPTORS: \*Phosphorus compounds, \*Nitrogen  
compounds, \*Amides, \*Imides, Preparation.

The purpose of the study was to prepare the amides and  
imides of oxyacids with phosphorus of the oxidation  
number +5, insofar as these were not known. The re-  
action of diphosphoric acid tetrachloride with ammonia  
was investigated with this in view. (Author)
