DESCRIPTORS: \*Mining engineering. Coal mines.  
\*Fans. Drifts. Cleaning.

For hydraulic cleaning of a fan drift a special pipe is  
led off the surface fire-fighting main and carried along  
the entire length of the drift, valves being fitted at 10  
metre intervals. A fire hose connected to each nut is  
equipped with pumps, the number of which depends on  
the length of the fan drift and the volume of settled  
dust. When the fan is not in operation (roughly once  
every fortnight) a jet of water at a pressure of 10-15
