DESCRIPTORS: *Bacteria, Aquatic animals, *Ships, *Fouling, Antifouling coatings, *Paints.

The problem of the correlation of bacteria and zooc-organisms of fouling is explained by studying glass tinted with toxic paints and immersed in tanks of circulating water and in water of a sea harbor. All the paints used now as anti-corrosive and anti-biological coatings are not toxic for marine bacteria. In the first 24 hours microorganisms fastened to the painted surface, intensively multiply on it and cover the paint with (Biological Sciences--Microbiology, TT, v. 8, no. 6)
