p. 175-112.

DESCRIPTORS: *Soil mechanics. *Clay. Adhesion.
Plasticity, Moisture, Test methods, Capillaries.

The "moisture of capillary saturation" is a character-
istic property of the soil. There exists a distinct
correlation between the "moisture of capillary satura-
tion" and the Attenberg limits. Determination of the
Atterberg limits by the "moisture of capillary satura-
tion" method is much shorter than the rolling method
and determination in Casagrande's apparatus. (Author)
