DESCRIPTORS: *Copolymerization, Ketones,
*Acrylic resins, *Polymers.

Experiments were carried out showing that copolymers
of methyl methacrylate and methyl isopropenyl ketone
can be prepared in which the monomers are equally
distributed through the individual fractions of the prod-
uct. In the absence of solvents, copolymers were ob-
tained with a content of the ketone amounting to 25 and
12.5%. In the presence of 50% ketone, no polymer is
formed. Copolymerization in solution gave copolymers
containing 50, 25 and 12.5% ketone. The polymers pre-

DESCRIPTORS: *Copolymerization, *Styrenes,
Ketones, Polymers

The method and conditions favoring copolymerization
were investigated on the example of styrene and methyl
isopropenyl ketone. Small amounts of methyl isopro-
penyl ketone accelerate polymerization of styrene in
emulsions, but additions exceeding 10% of the ketone
retard the process. Polymerization in emulsion in the
presence of benzoyl peroxide does not give copolymers,
while in the presence of hydrogen peroxide, conditions
may be created leading to its formation. Under favori-
ble conditions, copolymers are formed the chemical
