 THE EMISSION NEBULA IC443= S40, tr. by
 P. Kazakov. [1960] 2p. 1 ref. Trans. no. 5069.
 Order from LC or SLA in \$1.80; pb\$1.80 61-15231

Trans. of Astronomicheskii Tsirkulyar (USSR) 1959,
 no. 204, p. 13-14.

Spectral observations with a prism camera in the red
 indicate that matter, in the form of jets and filaments,
 is flowing away from the nebula or is carried away
 from it by a stream in two opposite directions. It is
 difficult to think that the formation (and the luminosity
 mechanism) of the filaments and jets situated near
 IC443+S40 and directed from north to south is a result
 of the effect of radiation, the ejection of gas from the
 stars, or a collision of nebulosities moving in space.
