CORRELATION BETWEEN ELECTRICAL AND
ELASTIC PROPERTIES OF SEDIMENTARY ROCKS.
[1962] [20]p. 6 refs.

Order from OTS or SLA \$1.60

62-18544

Trans. from Prikladnaya Geofizika (USSR) 1956, no. 15.

DESCRIPTORS: *Sedimentary rock, Elasticity, Electrical properties, Statistical functions, Well logging.

There is a high degree of correlation between the recoil energy and porosity of elastic rocks. The conductivity and elasticity of such rocks depend upon porosity; there is, therefore, a correlation between resistivity and elastic wave velocity. The analysis of a large body of experimental data shows a correlation of 0.7 between resistivity and acoustic rigidity, and a correlation of 0.65 between conductivity and pressure wave velocity. The correlation between conductivity and the (Earth Sciences, TI, v. 9, no. 6) (over)

p. 57-108. (Abstract available)

DESCRIPTORS: *Geophysical prospecting, Recording
systems, Resistance (Electrical), Rock (Geology).

Methods are presented of processing bilateral dipole
sounding curves based on theoretical calculations for the
simplest idealized sections. As the experience recently
gained in various geological provinces of the Soviet
Union shows, these methods prove to be efficient under
favorable conditions, i. e., when the electric resistivity
of rock is rather persistent. In more complicated cases,
interpretation of bilateral soundings often involves
