(NASA TECHNICAL TRANSLATION F-68. Transla-
tion from International Geophysical Year Program,
Section 5, no. 2, 1960, p. 40-53.)

An apparatus used in the investigation of meteor
activity, which employs a system of protection
against pulse interference, is described. Prelimi-
nary results of the measurement of meteor velocities
obtained by Russian observation stations during the
first 12 months of the International Geophysical Year
are presented, and a study of the physical properties
of the atmosphere at altitudes of 80 to 100 kilometers
is made.
