p. 82-89. (Abstract available)

DESCRIPTORS: Fishes, \*Conditioned reflex, \*Magnetic  
fields.

In experiments performed on carp, the possibility of  
forming reflexes or inhibitions with respect to a  
magnetic field was established. The threshold of  
perception of a magnetic field was from 10 to 30  
oersteds. Neither denervation of the lateral-line  
organs nor removal of the eyes disturbed the condi-  
tioned response. (NASA abstract)
