Trans. of mono. Puzyr'kovaya Kamera s Impul'snym  
Magnitnym Polem, Moscow, 1959.

This paper describes the structure of a propane bubble chamber 46 x 21 x 10 cm in size with an impulse magnetic field. The chamber works with a 10-second cycle. The magnetic field has the form of a damped sinusoid with the period  $\approx 25$  milliseconds and the maximum amplitude  $\approx 10000$  gauss. The variation of the maximum value of the field from cycle to cycle does not exceed 1%. The space nonuniformity of the field does not exceed 10%. (Lawrence Radiation Laboratory abstract)
