DESCRIPTORS: \*Evaporators, \*Carbohydrates,  
Compressors, Liquids, Steam, Operation.

The invention consists mainly and at the same time in  
recycling by compression the steam produced by one  
or several evaporation tanks in order to reintroduce  
the recompressed steam into a tank located above the  
plates, at which steam has been withdrawn and admit-  
ted to the compressors. In combining the means of re-  
cycling by ejection of live steam and by mechanical  
compression, means independently known per se, by
