DESCRIPTORS: Halogen compounds, *Phthalic acids,
Condensation, Polymerization, Molecular weight,
*Glycols, *Ethylenes.

The polycondensation of haloterephthalic acids with ethylene glycol leads to polymers endowed with a filament property, the melting point of which is lower, the greater the dissymmetry introduced into the nucleus of the terephthalic acid. Moreover, it appears that the difference in reactivity of ortho- and meta-carboxyls of the halogens influences the reaction which, depending on the case at hand, leads to more or less high polymers. Therapy.

An experimental study was made of the histopathological
alterations produced in the optic nerve of the rabbit by
alcoholic-tabagic intoxication. The simultaneous
administration of large doses of vitamin B₁₂, or of its
analogue C₁₂, proved to be capable of preventing or
arresting the appearance of the alterations.
