At ordinary temperatures mercerized cellulose ab-  
sorbs, sensibly the same amount of soda whatever  
may be the concentration of the solutions used be-  
tween 2N and 5N, while, for higher temperatures,  
around 40°, there is no important difference between  
the absorption of soda by mercerized and unmercer-

DESCRIPTORS: \*Copper alloys, \*Aluminum alloys,  
Crystal growth, Recrystallization.

In the complete absence of a foreign phase, discontin-  
uous growth was never observed, but always contin-  
uous growth. On the contrary, the introduction and  
evolution of a foreign phase in a solid solution by pre-  
cipitation followed by coalescence had been shown to be  
a very efficacious method, except for a few exceptions  
of making discontinuous growth appear and develop.
