SOME INVESTIGATIONS OF PAPERS AND INKS IN  
CONNECTION WITH A PRACTICAL PRINTING TEST.  
19 Dec 60. (p. (4 figs. omitted).  
Order from SLA ml\$1.80, ph\$1.80

61-10412

Trans. of Grafiska Forskningslaboratoriet.  
[Meddelanden] (Sweden) 1959, no. 42, p. 18-23.

In a letter press print shop several papers and inks of the same type but of different makes were subjected to a practical printing test on the same job. Remarkably large differences in possible printing speed with regard to the picking of the papers were found. The surface bonding strength of the papers was tested with the Dennison wax test and the LTF pick tester. Relatively good correlation was found between the practical results and the Dennison test but not with the pick tester. The surface strength of the papers seemed to stay in reverse proportion to their ash content. The inks were tested on the Inkimeter and the results correlated well.
