DESCRIPTORS: Metals, \*Sulfur, Phase studies,  
Molecular structure, Physical properties, Catalysts,  
Catalysis, Ions, Amines.

In analogy with the high and low molecular seleniums,  
the ring structure of the molecules of the correspond-  
ing forms of sulfur is discussed, and given an experi-  
mental basis. The splitting open of rings is facilitated  
by the presence of sulfur ions, and basic amines, and  
thus they are capable of catalyzing the conversions be-  
tween the high and low molecular phases. Likewise,  
they activate sulfur in chemical reactions. (Author)
