DESCRIPTORS: *Insecticides, *Hexachlorocyclohexanes,
*Chromatographic analysis, Adsorption, Silicon com-
pounds, Dioxides, *Gels.

The chromatographic procedure proposed by Harris for
the determination of γ -BHC was modified to enable use
of a smaller partition column and less reagents without
sacrificing accuracy. Silica gels having an adsorption
capacity of less than 5% (moisture adsorbed by silica
gel placed over 30% aqueous H_2SO_4) were found to be
suitable for the chromatographic procedure. (Author)
