SOME RESULTS OF THE SPECTRAL INVESTIGATION OF A SUPERHIGHFREQUENCY IMPULSE DISCHARGE IN A RESTRICTED DISCHARGE GAP, tr. by M. C. Selby. 17 Jan 61 [7]p. (2 figs. omitted) 5 refs. Order from LC or SLA ml\$1.80, ph\$1.80 61-15698

Trans. of *Optika i Spektroskopiya (USSR) 1960, v. 9, no. 6, p. 784-786.

Observations were made of the radiation of a discharge of helium and neon excited by a powerful super high frequency (SHF) impulse in a narrow gap placed across a coaxial line. By means of spectrum photography, with the help of visual observations and the photoelectric method, 16 lines of HeI and 24 lines of NeI were found in the red part of the spectrum. Ionic lines were not discovered in either gas. The intensity of the helium and neon lines follows almost exactly the amplitude changes of the SHF signal for helium to pressures of 10 mm mercury and for neon at pressures lower than (Physics--Electronics, TT, v. 5, no. 12) (over)

Bakel'man, I. Ya.
 ON ONE CLASS OF NON-LINEAR DIFFERENTIAL
 EQUATIONS. [1960] [9]p. 3 refs.
 Order from LC or SLA mi\$1.80, ph\$1.80 61-10681

Trans. of Akademiya Nauk SSSR. Doklady, 1959, v. 126,
 no. 2, p. 244-247.

Investigations are made of the Euclidian space Q of
 vectors $q = (q_1, \dots, q_n, q_1, \dots, q_n, q)$ and of the func-
 tion $F(q, x)$ when $q \in Q, x \in D$. Here D is the closed
 bounded region of the n -dimensional Euclidian space
 $x = (x_1, x_2, \dots, x_n)$. The boundary of D of the closed
 surface Γ is described in the neighborhood of each of
 its points x by equations $y_n = f(y_1, y_2, \dots, y_{n-1})$, where
 f is the twice continuously differentiable function of all
 its arguments. Axes y_1, y_2, \dots, y_{n-1} lie in the plane
 that is tangent to Γ at point X , and axis y_n is directed
 on the normal to Γ at point X . Three theorems are
 presented.
