DESCRIPTORS: \*Silicon, Lattices, \*Carbon, Impurities, \*Infrared spectroscopy, Absorption, Crystals.

A spectroscopic study of silicon doped with carbon showed an absorption peak located at  $12.20 \pm 0.05 \mu$ . Infra-red spectroscopy of silicon doped with carbon, therefore, affords a reliable method of qualitative detection of the presence of carbon; it can also develop into a quantitative method for determining the carbon content in silicon.
