A convex meniscus was experimentally observed in two narrow glass tubes of different cross sections situated in a wide sealed tube containing isoamyl alcohol heated to a certain temperature. The meniscus in the narrower tube fell lower with respect to the liquid level outside the tubes than in the wider one. In this case, the isoamyl alcohol behaves like mercury which is non-wetting with respect to glass. Equations were derived (Chemistry--Physical, TT, v. 11, no. 4) (over)

Smirnova, A. D.
ON THE PROBLEM REGARDING THE PHYSIO-
LOGICAL ROLE OF MYCORHIZA. [1962] 8p. 14 refs.
Order from OTS or SLA \$1.10 62-20265

Trans. of [Saratov U. Uchenye Zapiski] (USSR) 1959,
v. 64 [p. 135-138].

DESCRIPTORS: Physiology, *Fungi, Plants (Botany),
*Trees, Growth, Mycology.

The study that has been carried out makes it possible
to draw the following generalized conclusion. An oak
(tree), under definite conditions of cultivation, can
grow fairly well without the formation of mycorrhiza.
However, under the same conditions, the presence, in
it, of mycorrhiza, enhances its possibilities of utilizing
nutritive substances in the soil and water, increases
its vital activity and, in the long run, leads to an
intensification of growth. (Author)
