Trans. of *Optika i Spektroskopiya (USSR) 1960, v. 9,
no. 5, p. 631-634.

A method is described of measuring low photoelectric
currents (to values to several electrons per second),
making use of the open type secondary-electron mul-
tipliers. Photoemission distribution curves are given
of several substances in the spectrum range of 1216-
5461 A for quantum-yield values of 10^{-2} to 10^{-14} el/kv.
