The rigidity and resistance to vibration of stator frames
in large turbogenerators can be determined by means of
model tests. This was confirmed by comparing the re-
sults obtained on models and on large scale steel mock-
ups of sections of the full scale frames. The error does
not exceed 5%. Considerable divergence exists between
the calculated and experimental rigidity and natural fre-
quency values of frames with apertured transverse
annular walls, the experimental values being smaller.

DESCRIPTORS: *Metallic crystals, Lattices, Minerals,
Crystal structure.

A historical review is given of studies on deformation
arising from the rotation of crystal lattices under the
influence of mechanical forces. Topics include: rota-
tion bands in minerals; kink-band formation in metal
crystals on deformation by compression; kinks in metal
