The residual resistance of very pure thallium wires  
was increased by plastic deformation at liquid helium  
temperatures. The accompanying changes in the super-  
conducting transition temperature were measured.  
With gradually growing resistance ratio the transition  
temperature decreases by some hundredths of a degree.

Trans. of Japanese article from an unidentified source, 1947(?).

DESCRIPTORS: \*Adhesion, \*Mechanics.

Formulas expressing the relation between the stripping angle and the load required for stripping are derived by two different methods. The first method is based on bending-moment equilibrium, and the second method relies on a calculation of the work required for stripping. The same formula was obtained by both methods. This formula is critically examined in the light of experimental data. A K. S. slumeter (or yarn tester) was modified as a stripping tester of the fixed-
