STEPWISE ADSORPTION OF KRYPTON ON IRON

Adsorption.

We investigated, in addition to nitrogen adsorption,
adsorption of krypton particularly suitable for the
determination of small adsorption surface areas, using
the conventional method of Braunauer, Emmett and
Teller. It has been found that the adsorption isotherms
exhibited exceptionally marked breaks on iron surfaces
which did not have any promoter additions. Iron crys-
tals were made, similarly to iron catalysts, by the
reduction of pure synthetic magnetite. (Author)
