15 Feb 60 [8]p. Trafford Park trans. 2771; M 1561.  
Order from LC or SLA mi\$1.80, ph\$1.80 60-23005

Trans. of Teploenergetika (USSR) 1959 [v. 6] no. 12,  
p. 43-46.

External cooling of the rotor blades of turbines with  
an air-water mixture makes it possible, in principle,  
to ensure normal operating conditions at any tempera-  
ture. The thermal stresses in the disc of the turbine  
rotor wheel may also be reduced. Operating experi-  
ence of steam turbines shows that substantial de-  
struction of the inlet edges of blades, made from  
readily available materials, is observed at a high de-  
gree of steam wetness (more than 10 - 12%) during the  
course of many thousands of hours of operation. With  
a relative water consumption of 3.2 - 1% of the gas  
(Machinery-Engines, TT, v. 5, no. 5) (over)

Trans. of Akademiya Nauk SSSR. Doklady, 1954,  
v. 96, no. 5, p. 999-1002.  
Another translation is available from SLA as RT-3267.

A method of polarographic analysis is described that  
may be generally used for determining the functional  
group  $>SO_2$ . The presence of the  $-SO_3H$  group does  
not interfere with this determination.
