An approximate solution is presented of the problem of determination of pressure, force and moment acting on a spherical body which performs a general movement in a spherical space, filled with a viscous fluid. The velocity of translatory motion of the body and angular velocity of its rotation are assumed to be known and constant, and the motion is considered to be quasi-steady. The investigation is limited to the analysis of the par- (Machinery--Machine Parts, TT, v. 6, no. 4) (over)
