DESCRIPTORS: *Pectins, Processing, Food,
*Vegetables, *Preservation, Chemical analysis.

Green beans blanched at temperatures between 65.5 and
82°C had a greater proportion of their pectic substances
as pectic acid than beans receiving either no blanch
or blanches at 88°C or higher. This was found whether
the beans were examined after blanching or after cooking
at 115.5°C. The extent of the transformation of water
soluble pectin to pectic acid was increased with longer
