COMPREHENSIVE STUDY OF THE INTERACTION OF POSITIVE AND NEGATIVE IONS OF THE SAME KIND AND OF DIFFERENT ENERGY WITH METALLIC TARGETS OF POSITIVE IONS.

Order this book on GPO form 52.76, ph\$4.80. GI 15123

Trans. of Journal Tekhnicheskoy Fiziki (USSR) 1955, v. 25, pp. 186-198.

The secondary emission of nondegassed and degassed but not atomically clean targets of platinum and tungsten was investigated by the method of volt-ampere characteristics of the current in the target circuit as a function of the collector voltage. The targets were bombarded with like positive or negative ions of various elements. The energy was varied between 300 and 1250 ev. The secondary electron emission of nondegassed targets caused by negative ions is considerably more intense than that caused by positive ions. The coefficients gamma of secondary emission of degassed, but not (Physics Electronics, 11, v. 8, no. 11) (over)
