DESCRIPTORS: *Plants, *Classification, Israel, Trees.

Sixteen species are described in this short survey, four of which are new to science. Most of the others are new to Israel or to Asia in general. A few species which are most important for afforestation and as ornamental plants, and whose classification has till now been uncertain, have been entirely clarified and may be classified by means of the given key, the use of which does not demand any special technical knowledge. Quantitative determination of small amounts of the
lipemia clearing factor can be effected by determi-

obtainable with the aid of the factor. In the formation
of the clearing factor in vitro, the yield corresponds
to the amount of homogenate used, if plasma is used
in excess. With the aid of suitable mixtures, a series
of natural and synthetic mucopolysaccharides was
