DESCRIPTORS: *Operations research, *Scheduling,
Sequences, Matrix algebra.

Sequencing problems are concerned with working of
several products over a series of machines, where the
working times of these products differ from one
machine to another. The problem is to find an optimal
sequence of the products minimizing the total elapsed
time. Under certain restrictions the problem is re-
duced to solving the travelling salesman problem. The
method is illustrated by a simple example. (Author)
