A review of the literature and findings of the author's  
research lead to the conclusion that giant sex cells  
formed at any stage of spermatogenesis have lost the  
ability to undergo further normal development and  
division, and remain for a long time at the stage at  
which they were formed, while the other cells continue

A PECULIAR DIVISION OF THE NERVE CELLS OF  
CERTAIN AUTONOMIC GANGLIA OF THE CAT.  
[1962] [33]p. 5 refs. FASEB manu. script no. S 338-2.  
Order from OTS or SLA \$3.60 63-19023

Trava. ~~of Arkhiv Anatomii, Gistologii i Embriologii~~  
(USSR) 1962, v. 42, no. 2, p. 83-93.

DESCRIPTORS: \*Nerve cells, Histology. \*Ganglia,  
\*Autonomic nervous system, Cats, Morphology.

Studies were made at various seasons and days of the  
ganglia of the solar plexus, the superior and inferior  
mesenteric, stellate and superior cervical ganglia of  
90 cats. A great diversity of forms in each stage was  
observed. At first two regions of cytoplasm are  
formed in the neuron, one differentiated and the other  
undifferentiated. The nucleus becomes more compact  
and basophilic, and smaller, or is often elongated.
