A survey is made to systematize the information re-  
 lated to the methods of longwave infrared spectroscopy  
 and to recent Soviet and non-Soviet apparatus for ob-  
 taining and recording spectra for wave lengths up to  
 1000  $\mu$ . A table gives the basic characteristics of labo-  
 ratory type spectrometers for obtaining and recording  
 longwave infrared spectra which have been constructed  
 from 1932 through 1956.
