Experiments established that the reaction of a 1,4-diol  
 and a phthalic anhydride in the presence of a catalyst  
 consequently yields a phthalic anhydride derivative. The  
 catalyst used is a mixture of the reaction of  
 1,4-diol with phthalic anhydride.

Integral equations are derived for use in determining perturbations in the Keplerian elements of the orbit Hansen which determines the position and orientation with respect to the orbit plane of disturbed motion and then the rectangular coordinates of the disturbed mass point in the osculating plane. The equations derived hold for large as well as small values of the inclination of the orbit plane contrary to some other methods. The perturbations may also be expressed in polar coordinates.
