0.1 mg./Kg. Dianabol was given for 5 months to 11
healthy infants. In addition to a coordinated acceleration
of growth in weight and length a 10% increase of the
fluid volume, (determined with the thiazulfate method,
was found. Nevertheless it is probable that the weight
gain is caused essentially by a growth of the cell mass
and that the composition of the latter is not influenced
by Dianabol. (Author)
