The antiglobulin fixation reaction was used to determine  
the presence of antibodies directed against the blood  
cells of 10 controls and 26 patients with diseases of  
the blood forming system. These immunohematological  
studies showed that antibodies were present and  
directed against the erythrocytes in 12 cases of

ment of an input circuit and an IF amplifier for a  
24-channel pulse-phase-modulation system. Practical  
construction of the amplifier is described; pertinent  
data and curves are included. (Author)

The work presented reports on polymerization reactions with the use of epoxide monomers as initiators. To illustrate particularly the unsaturated polyester resins we show the differences compared to the usual peroxide curing, giving technical data and mentioning examples of application as well as giving particulars to clarify the reaction.
