Austenite steels containing 0.4 to 0.5% C and 18% Mn
possess cold brittleness. The cold brittleness can be
greatly reduced or completely eliminated by additional
alloying with Cr or Ni. The cause of the cold brittle-
ness is the formation of deformation martensite during

The following motion of a body near a fixed point in the
Newtonian field of forces is investigated. Let the body
possess a dynamic symmetry ($A = B$), the fixed point
coincide with center of the body masses, and, besides,
the initial conditions be such: the lateral components
of the angular velocity are equal to zero ($p_0 = q_0 = 0$),
whereas the longitudinal component is arbitrary

An expectation method is presented for predicting the
appearance of an artificial satellite within the obser-
vation range of the spotting equipment. For success-
ful application of the method, it is important to take
into account only one variable factor, namely, the
rate of orbit precession.
