The calculation of diffusion coefficients in a lattice
necessitates the knowledge of a correct method of
weighting the free paths of the different constituents.
An unambiguous definition of this weighting method is

This study furnishes the following results: (1) The birefringence disappeared exponentially with a time of relaxation $1/6 D$ (D being the constant of diffusion of rotation of molecules) independently of the initial conditions. (2) The law of establishment of the field depends on the nature of the couple of orientation and there can
