EMULSIFYING LUBRICATING OILS WITH PRODUCTS

DESCRIPTORS: *Lubrication. *Oils. Colloids.
Sulfonates.

Sodium salts of sulfonic acids prepared from shale tar fractions are a good emulsifier of lubricating oils. In comparison with naphthenesulfonic acids a considerably smaller amount of this agent is required. Preparation of concentrated emulsions can be effected at room temperature, which simplifies the manufacturing process. No alcohol is required for the preparation of an emulsion. The corrosion of steel is completely prevented by adding to the aqueous emulsion up to 0.55% sodium carbonate. (Author)
