An automatic transpiration-measurement apparatus is described. Results with this apparatus showed that the daily transpiration of tobacco plants is affected by weather, atmosphere and other factors. A gradual increase occurs with the increase in volume of the plant during growth, but after topping there is a gradual fall with the reduction in size (due to the topping) and with (Agriculture--Plant Cultivation, TT, v. 7, no. 8) (over)

Trans. of unidentified French mono., n.p., n.d.

Results are presented of industrial research on improving the heating of the Martin furnaces (1) by using a strong reaction thrust in the burners, (2) by regulating combustion and limiting oxidation of the charges during fusion, (3) by using additional oxygen to improve the heating, and (4) by using multiple burners. Basic research and industrial studies on the conditions of furnace operation are also noted.
