Trans. of Transportnoye Stroitel'stvo (USSR) 1959  
[v. 9] no. 11, p. 12-15.

The railway construction work is described that has been performed on the western sector of the Abakan-Tayshet line under complex conditions involving mountainous conditions, heavy precipitation, powerful winds, and extremely low temperatures. The Abakan-Tayshet line, which is part of the current 7-year plan, will connect the South Siberian main line with the Trans-Siberian trunk line.

Methods are described for the preparation and cutting of cross sections of 1  $\mu$  thickness. Cross sections of viscose rayon of 1  $\mu$  and 6  $\mu$  are evaluated comparatively. Shapes, pores, pigments and structure of the cross sections correspond more closely to reality in the case of cutting thicknesses of 1  $\mu$  and are more clearly visible than in the case of 6  $\mu$  cross sections. The regularity of the cross sections of a separate thread of rayon viscose is studied over various distances by means of the 1  $\mu$  cutting method.
